Continuation of 11. does NOT place the application in condition for allowance because: The applicants have argued substantially the same reasons as set forth in the prior office action and the examiner incorporates by reference the arguments dated 10/17/2008. In summation, the applicants argue against the Yara reference stating that the claims differentiate from the prior art because of the pulse duration and the resulting claim properties. however, the examiner notes again that Yara discloses 1000 ns pulse voltage and the claims encompass 999 ns. The applicants have not provide any factual evidence comparing the prior art with the present applicant. The mere fact that Yara discloses an example does not limit the entire teaching of the reference to the discloses embodiment. Yara clearly discloses 1000 ns pulses and thus such is within the teaching of the reference. Therefore, the applicants arguments that the film of Yara is completely different as those claimed is not persuasive because the applicants have not provided any factual evidence to support the position that 999 ns is distinct from 1000 ns. The applicants have argued against the Hartmann and Awazu reference stating that their Raman peaks are a result of impurities, and the claimed invention is a good quality film and the Raman spectrum is not due to impurities. This argument is clearly not commensurate in scope with the claims or supported by any factual evidence and thus is deemed moot. The applicant argue Yara only enables a pulse duration of 20 microseconds, the examiner disagrees and notes that nothing in Yara suggests such a limitation. The mere fact that the reference discloses a range of pulse duration effectively rebuts this assertion. All other arguments not specifically addressed are duplicate of earlier arguments that have previously been addressed.
